**Step 5: Enable CloudWatch Monitoring**

1. **"Enable Detailed login" from EC2 dashboard if you haven't enabled during EC2 instance creation.**
2. **Open EC2 dashboard. Select your EC2 machine. Go to Actions > Monitor and troubleshoot > manage detailed monitoring.**

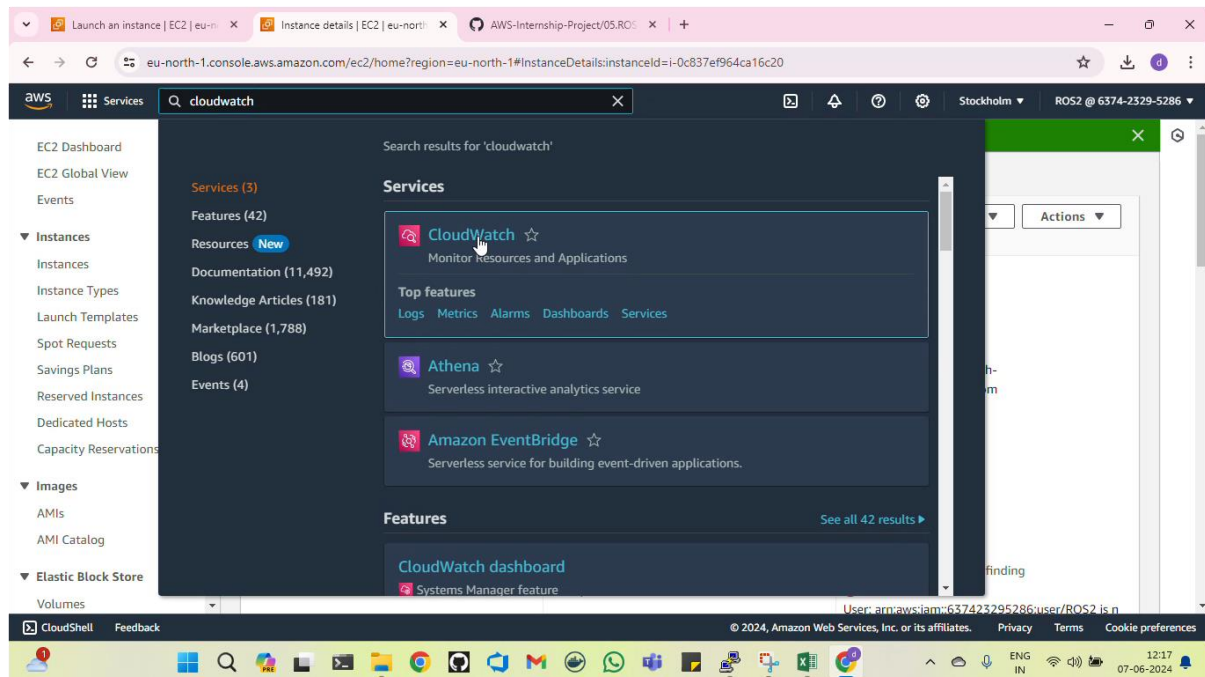

3. Here one window will pop-up. Tick in "Enable" checkbox and click "Confirm".

4. View CloudWatch Dashboard

5. Navigate to the CloudWatch dashboard to view the monitoring metrics for the EC2 instance.

6. This dashboard will show you metrics related with EC2 instance such as "networking average" "CPU Utilization"

7. Or simply you can open EC2 instance dashboard with selection of your EC2 instance. Navigate to Monitoring tab. And here you will find all metrics related with monitoring.
